living, working &
playing germ free.

THE LONG LASTING ANTIMICROBIAL SOLUTION

cutting edge nano technology

Zoono the antimicrobial miracle made from the most basic of raw organic compounds is approved safe for humans and animals by the US Environmental Protection Agency. Zoono is pure nano technology at it's best.

The sword-shape long chain organic aliphatic component of the molecule stabs and electrocutes microbial cells on contact, and continues to do so as it encounters new cells.

Because it does not kill the organisms by toxicity, they cannot adapt to it, so there is no possibility of immunity developing.

The Zoono molecule forms ionic and covalent associations which bond it to the surface it is targeted to protect, making an antimicrobial layer capable of remaining potent for up to a month from a single application.

Please see below a sample of the Bacteria and Viral Organisms that Zoono kills over an extended period of time

- Staphylococcus aureus
- Pseudomonas aeruginosa
- Escherichia coli (Ecoli)
- Proteus vulgaris
- Methycillin resistant Staphylococcus aureus (MRSA)
- Vancomycin resistant Enterococcus (VRE)
- Legionella pneumoniacae
- Salmonella cholerae suis
- Cryptosporidium parvum [oocysts]
- Influenza A2 (Asian)
- Citrobacter Freudii MS2

Biotest Laboratories Pty Ltd in Brisbane, A TGA (Therapeutic Goods Administration Certified Laboratory) recently achieved test results on some of these organisms with Zoono and achieved kill rates of greater than 99.9% in most cases.

THE ANTI MICROBIAL SOLUTION FOR THE FUTURE HERE RIGHT NOW

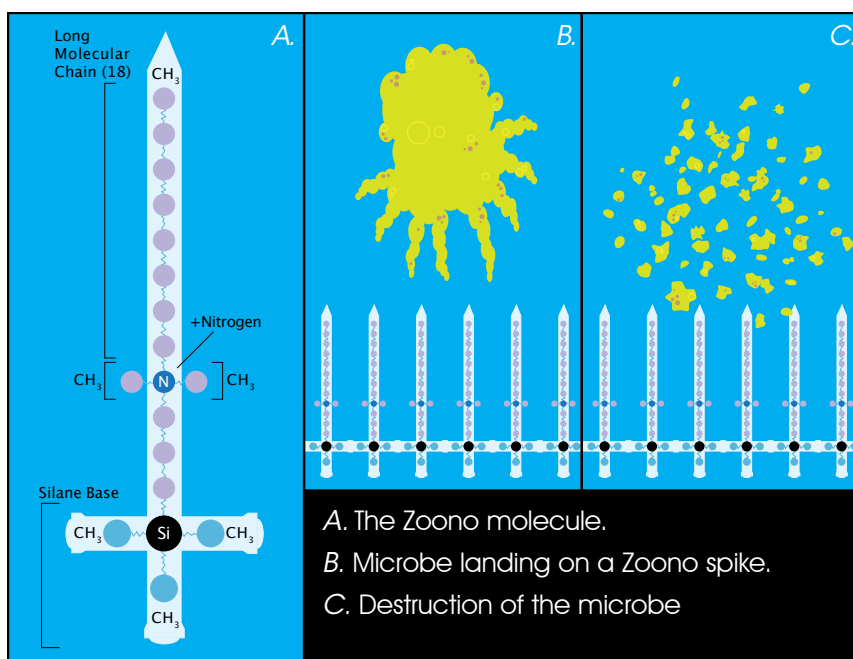

non-toxic broad spectrum protection proved to 28 days

Zoono has been tested by organisations including Dow Corning USA, Arizona State University and the US Environmental Protection Agency. It has been proven to provide long-lasting antimicrobial effect while having approximately the same toxicity as vitamin C with a low LD50 rating of 12.27

Whilst completely harmless to humans and animals Zoono is proven deadly to a wide range of micro-organisms:

Zoono is an Anti-bacterial, Anti-virus, Anti-fungi and Anti-protzoa – for a full list visit www.zoono.com.au

And Zoono is proven by independent testing to maintain its protection up to 28 days from application.

Organo Silane Technology

The long sword-shape Zoono molecule is a triumph of technologies: silane technology of silicon and oxygen molecules which combines with nitrogen technology to make a durable and long lasting bond to most surfaces, wether porous or non-porous.

The covalent bonding is what gives Zoono its long lasting effect, while a long chain of carbon atom causes its piercing effect, penetrating the walls of microbes attracted to the positively charged nitrogen.

How does Zoono compare?

Zoonocide	Other Products
Physical kill	Kills with poisoning the cells
Selective	Non- selective
Non Leaching	Leaching
Environmentally stable	Bleeds harmful toxins into the environment
Non Carcinogenic	Some are Carcinogenic
Impossible to Mutate	Encourages mutations resistance super bugs
Long life invisible shield	Short life in seconds
Prevents Cross Contamination	Permits Cross contamination
One Application	Multiple applications
Odourless	Unpleasant odours
Non-toxic to humans, animals	Mostly highly toxic
Non Corrosive	Mostly Corrosive
Adheres to any surface	No adhesion

THE ANTI MICROBIAL SOLUTION FOR THE FUTURE HERE RIGHT NOW

can you afford not to zoono?

Zoono's long lasting antimicrobial protection and easy application make it the natural solution in so many areas:

- Medical Healthcare and Hospitals
- Aged Care
- Child Care
- Food preparation
- Hospitality
- Sports Facilities
- Travel
- Transport
- Households

In fact, anywhere that numbers of people interact, "including your own office"

Presenteeism, where people who should stay at home sick feel compelled to still come to work, costs Australian business an estimated \$15 billion a year.

In this climate, a low-cost monthly mist or spray application of Zoono to desks, computer equipment, telephones staff lunch area, kitchen benches and toilet areas is an investment in company risk management which will pay large dividends.

Zoono lets you live, work and play germ free, in every environment.

TOP SECRET

the world's best kept antimicrobial secret

Original Technology developed for the US Navy to control the spread of microbial infections within the confined atmosphere of nuclear submarines, Zoono is a mechanical molecular device which destroys microbial cells by stabbing through the cell membrane and electrocuting the organism, with the same molecule capable of attacking new cells again and again.

Until the 1990s this cutting edge technology was literally a military secret.

Today it has been re-engineered into a water based solution which provides the antibacterial, antiviral, anti fungus and anti

algae protection of a broad spectrum antimicrobial sanitiser that continuously kills for up to one month from each application – while being totally non-toxic to humans and animals.

It has US EPA approval for use with humans and animals, is approved for food handling by the US Department of Agriculture, and has food safety approval in New Zealand and Australia.
